

IT Service Desk Troubleshooting

Michael Melaku | Self-Directed Troubleshooting Lab

This portfolio documents five self-directed troubleshooting scenarios completed to build and demonstrate core IT service desk skills: performance triage, software support, network diagnostics, hardware/peripheral troubleshooting, and connectivity verification. Each entry follows the standard incident-ticket structure: Issue, Investigation, Result, and Skills Demonstrated, to reflect real-world service desk documentation practices.

Ticket Summary

Ticket	Issue	Category	Status
INC-001	Computer running slowly	Performance	Resolved
INC-002	Application won't open	Software	Resolved
INC-003	Wi-Fi connection issue	Network	Resolved
INC-004	Bluetooth device won't connect	Hardware	Investigating
INC-005	User can't access website	Connectivity	Resolved

Ticket Details

INC-001 - Computer Running Slowly

Status: Resolved

Issue: User reported that their Windows computer was running slowly.

Investigation

- Opened Windows Task Manager and observed 92% memory utilization; CPU and disk utilization were comparatively low, isolating memory as the likely bottleneck.
- Investigated Google Chrome's memory usage and identified several active tabs and background processes consuming significant memory.
- Closed unnecessary browser tabs and processes, then monitored system memory usage to confirm improvement.

Result: Memory utilization decreased from 92% to 86%, resolving the reported slowdown.

Skills Demonstrated

Windows Task Manager, performance monitoring, resource analysis, root-cause troubleshooting, technical documentation.

Before

After

INC-002 - Application Won't Open

Status: Resolved

Issue: Simulated user report that an application (Google Chrome) would not open.

Investigation

- Closed Google Chrome completely, including background processes, and attempted to restart it.
- Verified that Chrome launched successfully after the restart.
- Checked Chrome's update status via the application's About page to rule out a version-related issue.

Result: Chrome opened successfully after restarting; no underlying application issue was found.

Skills Demonstrated

Application troubleshooting, process management, software maintenance, problem diagnosis, technical documentation.

INC-003 - Wi-Fi Connectivity Test

Status: Resolved

Issue: Verified whether a Windows computer was experiencing a network connectivity issue.

Investigation

- Confirmed the computer was actively connected to Wi-Fi.
- Tested multiple websites in-browser and confirmed they loaded successfully.
- Ran ipconfig to review the network configuration and confirmed a Default Gateway was present.
- Ran ping google.com from Command Prompt to test end-to-end connectivity.

Result: Received successful replies from Google, confirming working internet connectivity end-to-end.

Skills Demonstrated

Network troubleshooting, Command Prompt (ipconfig, ping), connectivity diagnostics, technical documentation.

INC-004 - Bluetooth Device Connection Issue

Status: Investigating

Issue: AirPods were not appearing as an available device in Windows Bluetooth discovery on a laptop.

Investigation

- Confirmed Bluetooth was enabled on the laptop.
- Opened Windows Bluetooth device discovery and placed the AirPods into pairing mode.
- Confirmed that Windows was able to detect other nearby Bluetooth devices, isolating the issue to this specific device.
- AirPods did not appear in the available-device list despite being in pairing mode.

Result: Issue remained unresolved after initial troubleshooting; AirPods stayed undiscoverable. Next steps would include toggling Bluetooth off/on, removing cached pairing data, updating Bluetooth drivers, and testing the AirPods against a second device to isolate whether the fault is device- or laptop-side.

Skills Demonstrated

Bluetooth/peripheral troubleshooting, device discovery diagnostics, Windows settings administration, structured escalation planning, technical documentation.

INC-005 - Website Access Test

Status: Resolved

Issue: Verified whether a Windows laptop could successfully access a website.

Investigation

- Opened Google Chrome and navigated to a live website (Wikipedia).
- Confirmed the site loaded fully and without errors.
- Validated that both the browser and the underlying internet connection were functioning correctly.

Result: Website loaded successfully with no access issue observed; connectivity confirmed end-to-end.

Skills Demonstrated

Web connectivity troubleshooting, browser diagnostics, problem verification, technical documentation.
